

# PVC COATED Weldable Webbing™

Add Flexible Strength to Vinyl Fabrics

Curtainside Trailers, Tarpaulins, Signs, Banners, Billboards, Tents, Tension Structures, Awnings, Inflatable Structures, Pool Covers, Field Covers, Environmental Barriers.

Non-wicking Weldable Webbing is tightly woven polyester (PET) webbing fully coated and impregnated with thermo-plastic vinyl (PVC). Proven in the European curtainside trailer industry, and now widely accepted in the North American fabric structure, tent, tarp, sign, and banner industries, PVC-Coated Webbing achieves maximum-strength welds using hot air, hot wedge, or high frequency welding. It can be bonded using vinyl-solvent adhesives and, as a textile product, it can be sewn.
